MAKE ID CARDS FOR YOUR FAMILY (LEVEL 2)

Description
The learner will interview and make ID cards for each member of the family to foster connectedness and learn about differences and similarities, in addition to Arabic vocabulary and practice their writing skills!
Note: the activity can also be adapted to English or another language

Leading Question
Can you create ID cards for the members of your family that capture some similarities, differences, and other personal information about them?

Total Time Required
~4.5 hours over 4 days

Supplies Required
Pencil, paper/notebook, color pens, stickers (optional), glue (optional)

Learning Outcomes
1. Practice writing skills
2. Practice the interrogative form
3. Vocabulary

Previous Learning
Vocabulary in language used – colors, numbers, activities, etc.

DAY 1

Today you will learn what an ID card is and start creating it.

<table>
<thead>
<tr>
<th>Suggested Duration</th>
<th>Activity and Description</th>
</tr>
</thead>
</table>
| 10 minutes          | ● The learner will be working on a project to understand how everyone in your house is similar or different and make ID cards for each member to compare how they answer some questions.  
● ID cards contain information about someone that can help identify them like their name, age, job etc. It also has your photo. You can show the learner an ID card that belongs to anyone in the family.  
● Tell them that everyone has their own look, style, way of thinking and that it is important that we understand and respect differences. The learner can brainstorm how they are similar and different compared to siblings and other family members. |

| 10 minutes          | ● The learner will come up with a few topics that will serve as categories to compare differences of opinion or habits in the ID cards. For example, he... |
or she may want to know what everyone’s favorite color, movie, game, dish etc. is. Come up with at least 10-15 categories that include personal information such as name, age, height, eye color, hair color/type, etc. and some preferences for movies, books, music etc.

5 - 10 minutes
- Introduce the topic of genes and explain that features and traits are passed down by parents to their children, which is why we have similar hair and eye colors in our family, for example. Explain that some features and traits are less obvious than others, such as being right/left-handed, having attached earlobes, being able to roll one’s tongue etc. The learner will reflect on why they think family members share similarities in how they look and come up with a few questions related to inherited features or traits.

20 minutes
- The learner will then write down/trace the same list of categories/questions on separate pieces of paper or pages of a notebook to record each family member’s responses. You may also provide a template like the one shown below:

  **Template:**

  Name: ______________
  Age: __________
  Height: __________
  Favorite movie: ______________
  Favorite meal: ______________
  Favorite color: ______________
  Favorite book: ______________
  Favorite country I have visited: ______________
  Favorite animal: ______________
  Favorite superhero: ______________
  Right or left-handed: ______________

10 minutes
- The learner will draw each family member’s face on the card. If this is difficult, they can glue a photo of the family member, draw stick figures, use a sticker, or just write down their names.
  - If the learner is unable to write yet, write down the categories and names in dotted lines for them to trace it.
10-20 minutes

- Numeracy extension: let’s see how many family members share similarities in these categories!
  - As you interview each member, make a note of their answers and see which answers repeat. Enter the frequent responses into a tally table like the one below to see how many family members share similarities in the categories.

<table>
<thead>
<tr>
<th>Item</th>
<th>Family members who have it</th>
<th>Tally</th>
<th>Total</th>
<th>%</th>
</tr>
</thead>
<tbody>
<tr>
<td>Black hair</td>
<td>Mom, dad, me</td>
<td>III</td>
<td>3</td>
<td>60%</td>
</tr>
<tr>
<td>Favorite color is yellow</td>
<td>Me, brother</td>
<td>II</td>
<td>2</td>
<td>40%</td>
</tr>
<tr>
<td>Favorite animal is lion</td>
<td>Me, mom, dad, brother, sister</td>
<td>I</td>
<td></td>
<td>I</td>
</tr>
<tr>
<td>Right-handed</td>
<td>Me, mom, sister, dad</td>
<td>III</td>
<td>4</td>
<td>80%</td>
</tr>
</tbody>
</table>

- The learner can calculate the average of all similarities to see how similar family members are across the different categories. The average is the sum of all observations divided by the number of observations. In our example, we would do this by first adding 3 + 2 + 5 + 4 = 14, then dividing the total by the number of entries or categories in the table 14/4 = 3.5. This means that on average, 3.5 family members share similarities across the different categories.

- We can also calculate the average percentage of similarities by calculating the percentage of similarity in each category (if 3 out of 5 people share similarities, we would divide 3 by 5 and then multiply the result by 100 to get the percentage 3/5 = 0.6; 0.6 x 100 = 60%).

- Then we would add the total and divide it by the number of categories. In our example, this would be 60% + 40% + 100% + 80% = 280%; 280/4 = 70%, which means 70% of family members share similarities on average in the categories listed.

---

**DAY 2**

Today you will be asking family members questions to find out their answers.

<table>

5 minutes

- The learner will reflect on how they are planning to interview family members.

5 minutes

- Inform the learner that they must ask them questions in Arabic or English and use what, why, when, who, and why to ask. Give the learner a list of questions they can ask each family member or have them come up with their own. Suggestions (see template above):
  - **What** is your favorite movie?
  - **How** many countries have you traveled to? **What** is your favorite country from all those that you have visited?
  - **What** is your favorite meal?
  - **Who** is your favorite superhero? (This could be a fictional character, or someone you look up to, like your mother!) **Why** is this your favorite superhero? **What** makes them special?

30-60 minutes

- The learner will interview each family member independently and record their answers by writing or drawing the responses with the support of the interviewees who can write responses in dotted lines for the learner to trace if they cannot yet write.
- Inform the learner of the criteria on which the outcome will be assessed. Tell them that they need to:
  - Interview everyone at home and ask interesting questions each family member will care about
  - Write/trace their answers on the template you gave them or that they designed neatly
  - Draw the family members on the card in an interesting way
- If the learner does not have siblings, they can record their own responses and those of the guardians/parents, family members, etc.

**DAY 3**

Today you will continue the ID cards.

<table>
<thead>
<tr>
<th>Suggested Duration</th>
<th>Activity and Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>10 minutes</td>
<td>After completing the cards with the information from the interviews, the learner will write on a big chart paper</td>
</tr>
</tbody>
</table>
  - Things that connect us: similarities between two or more family members. The learner will focus on preferences but also things we are born with like hair type/color, skin color, eye shape/color, being left or right-handed, having attached earlobes etc.
  - Things that make us special: differences between two or more family members (preferences and genetic traits and features)

EAA welcomes feedback on its projects in order to improve, please use this link:
https://forms.gle/LGAP9k17fMyJrKJN7
Following this exercise, the learner will gather all the cards and try to make:
- A short story of 4-8 sentences about one family member that was interviewed and their superpowers. At least 2 of the answers that family member gave should be part of that story; or
- A poem about one family member using words from the cards. With the help of an adult, the learner will identify (or come up with) 4-8 rhyming words and make a 4-8 sentence poem about one family member using at least two of the answers they gave in the interview.

Tip: If the learner is too young, you can ask him or her to come up with rhyming words and you can provide incomplete sentences as templates for them to fill with their rhyming words.

**DAY 4**

Today you will finish and present the cards to your family.

<table>
<thead>
<tr>
<th>Suggested Duration</th>
<th>Activity and Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>5 minutes</td>
<td>The learner will discuss his or her thoughts about the experience and what they learned about their family</td>
</tr>
</tbody>
</table>
| 20-30 minutes      | Ask the learner to present:  
- Their cards  
- Things that connect us and things that make us unique  
- Poem or short story to the family |
| 10 minutes         | After the learner completes his or her presentation, ask them to finish, complete, and decorate the cards  
- You can cut the pages up into long cards (or tear them out of the notebook first) and hand them to the family member to whom they belong. Alternatively, you may glue them onto a color chart paper and hang them on a board/wall etc. to celebrate the learner’s work! |
| 5-10 minutes       | Before handing out the cards, the family can play a guessing game. The learner or another member of the family can read responses from the cards and ask the family to guess who the person is based on the responses. |
| 10-20 minutes      | Numeracy extensions:  
- The learner can calculate the age range in the family by subtracting the smallest age from the biggest age |
- The learner can find the average height and weight in the household
- Superlatives: learners can compare the cards to find out who the tallest person in the family is, or who is the heaviest as a way to practice both superlatives (comparison) and bigger vs smaller numbers

**ASSESSMENT CRITERIA**

- Completed interviews of each family member
- Legible writing or tracing of responses
- Completed cards for each family member
- Examples of things that connect us and things that make us unique
- Poem/short story – 4 sentences minimum
- Presentation of cards, things that connect us and things that make us unique, and poem/story

**ADDITIONAL ENRICHMENT ACTIVITIES**

You can also make the poem or short story longer, or require them to include more interview responses

**MODIFICATIONS TO SIMPLIFY**

The project can be made simpler by having the learner write a few sentences or short poems/stories about each family member in their notebook and compare similarities and differences
