Create your own Rube Goldberg Machine! (Level 1)

Description
Teach your learners the principles of engineering and the values of resilience, creativity, and attention to detail with this hands-on activity.

Leading Question
How can we create a machine that helps us do something useful or fun in our house?

Total Time Required
30-50 minutes per day over 5 days.

Supplies Required
Pencil, color pens, paper/notebook, household items to create the machine (ball, toy car, Legos, tape, straws, cards, dominoes, strings, etc. - any items found at home)

Learning Outcomes
1. Understanding of motion and force.
2. Understanding of an example of a machine that uses force to work.
3. Design and execution of a machine.

Previous Learning
Basic understanding of force and motion strand (G1 science)

DAY 1

Today you will learn about what makes things move.

Suggested Duration
Activity and Description

10-20 minutes
Discussion:
- What is motion?
  - Let the learner reflect and answer. They may refer to their science textbook
  - Explain that motion is when something moves from one place to another
- How do things move? The learner will stand up and act out how these objects move:
- Do these objects move on their own?
  - Let the learner reflect and answer
  - Explain that some objects (like people and animals) move on their own, while others (cars and trolleys) need someone to push or start them. This is called force.

- What is a machine?
  - Let the learner reflect and answer
  - A machine is something that is designed to make our work easier. Give them examples: wheels, scissors, cars are all different types of machines

- Do machines move on their own? How does a bicycle move?
  - Let the learner reflect and answer
  - Explain that a bicycle works to move us from one point to another by applying force to the pedals

| 10-20 minutes | The learner will pick an item either from the house or his or her imagination, draw it, and write how it moves. If he or she cannot write yet, they can draw an arrow, zigzag line etc. to depict the motion of the item |

---

**DAY 2**

Today you will look at different videos and ways to build a new machine.

<table>
<thead>
<tr>
<th>Suggested Duration</th>
<th>Activity and Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>5-10 minutes</td>
<td>Watch some videos Rube Goldberg machines online to get the learner excited about building their own. If you do not have access to the internet, you can show them one of the images below:</td>
</tr>
</tbody>
</table>

To put out a candle:

- The learner will reflect on What is happening in this video/image?
- Explain that a Rube Goldberg machine is a type of machine that is made to do something for us (such as pressing a button), and has many different parts connected to each other and move together to achieve the goal

5-10 minutes

15 minutes

- The learner will walk around the house collecting 5-10 items and place them on a table.
DAY 3

Today you will design your own Rube Goldberg machine!

<table>
<thead>
<tr>
<th>Suggested Duration</th>
<th>Activity and Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>2 minutes</td>
<td>● Explain that the learner will be creating their own Rube Goldberg machine at home! Tell him or her that a Rube Goldberg machine must meet the following criteria. It should have many small parts arranged close to each other. It must do something at the end – like ring a bell, push a button, etc.</td>
</tr>
<tr>
<td>20-30 minutes</td>
<td>● The learner will reflect on the type and purpose of the machine they want to make. They can watch more videos if needed to get inspiration. Ask him or her to draw the machine they want to build in their notebook or on a piece of paper using a pencil. A machine to put sugar in tea, made of a small ball, a few wooden popsicle sticks and a cup with tea at the end. A machine to pop a balloon made of a small ball, toy car/light stone with a pin attached, a wooden plan or popsicle sticks and a balloon at the end.</td>
</tr>
<tr>
<td>10 minutes</td>
<td>● Discuss: What is the purpose of your machine? What is it making easier for your to do? What items in your house do you think you can use to create your Rube Goldberg machine that you have drawn?</td>
</tr>
</tbody>
</table>

DAY 4

Today you will assemble and create your own Rube Goldberg machine.

<table>
<thead>
<tr>
<th>Suggested Duration</th>
<th>Activity and Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>10-20 minutes</td>
<td>● Time to test our design! Under your supervision, the learner will assemble all the items, allow her or him to set up and test a part of the machine, e.g. a toy car with a pin taped to the top sliding down a ramp made of popsicle sticks and popping a balloon. You can also create some items using paper or other adaptable material, if some items are unavailable. After the setup is complete, ask them to get the machine going and observe what happens together.</td>
</tr>
</tbody>
</table>
Today you will refine your machine so that it works perfectly!

**ASSESSMENT CRITERIA**

- Successful creation of a Rube Goldberg machine that consists of 3 or more simple and/or compound machines, and that solves some problem/serves some purpose.

EAA welcomes feedback on its projects in order to improve, please use this link: https://forms.gle/LGAP9k17fMyJrKJN7
ADDITIONAL ENRICHMENT ACTIVITIES

- There is always room for extending the complexity of the final design by adding more items.
